

Pond his Polymyxos. 1605.

A president for Prognosticators,

or

A new Almanack for this

present yeare of our Lord,
M. DC. V.

Being the first after Leape yeare.

Calculated for the Latitude, and
Meridian of the Honorable Citie
of London, and generally for all
great Britaine: Amplified with
new additions.

By Edward Pond,

Professor of the Mathematickes.

Encyclopaedia BODLEIANA

Imprinted at London for the
company of Stationers.

The Contents, use, and prooffe, of this Almanack. 1605.

- A** Briefe computation of Chronologie of time, Deut. 4. 32.
1. The dayes of moueable feasts, vulgar and sovraine.
3. The moueable feasts, the next yeare 1606. Leu. 23.
4. A perpetuall rule for all other feasts.
5. The Anatomie of man, and description of the 12. signes.
6. The time of the beginning, and the manner of account, of
the yeare, according to diuers nations, Exod. 12.
7. A description of the sundry kindes of months.
8. Of the beginning of the day, after diuers accounts.
9. A Kalender of the Hebrews, Grecians, and Egyptians,
yeares and months, compared with our Iulian and Gre-
gorian yeare.
10. The dayes of the Natinitie, and death, and the yeares
since, of diuers men worthy memory, prou. 10. 7.
11. The dayes of many worthy actes done, remembered in
ecclesiasticall histories, Iob. 8. 8. 9.
12. The beginning and ending of the 4. Termes of lawe,
with their 21. returnes (in the kalender) 2. Cro. 12. 5. 6. 7.
13. The time when the Sunne entred into euery of the xii.
Signes, whereby is described the month Solar, psal. 111.
14.
15. The raigne of the Kings of England, &c. whereby may
be knowne, the time since the date of any auncient wri-
ting, by deducting the yeare of the King in the which it
was dated, from the number of yeares (found in the Kal-
ender) since he began his raigne, and the remainder
sheweth your desire.
16. The number of Sundayes after Easter, and Trinitie.
17. The

17. The signe, and degree, wherein the Moone moueth euerie day, at noone, (each signe hath 30. degrees) psal. 104. 19.
 18. The houre & minute of the Sunne setting, for euerie day in the yeare, psal. 104. 19. 24. Job. 36. 24. 25. 26. pl. 136. which houres and minutes of Sunne setting, is halfe the length of the same day from Sunne rising, as the 8. of Ianuarie he setteth at 4. and 8. minutes, therefore the length of the same day is 8. houres 16. min. To know the time of Sunne rising, looke how many houres and minutes he setteth after 3. 4. 5. 6. 7. 8. so many houres and minutes he riseth before 9. 8. 7. 6. 5. 4. as the same 8. day he setteth 8. min. after 4. he riseth 8. min. before 8. that is, at 7. and 52. minutes, which likewise is halfe the length of the same night, psal. 10. 1. 2.

19. The meeting and aspects, of the Planets, amongst themselves, Inde. 13. with their motion and places in the Zodiacke, and the time when they are direct in motion, or become Retrograde in respect of our sight: likewise when the Sunne or Moone are in their Apogees or stowe motion, then being farthest distant from the earth, or in their perigee on or first motion, as then neare the earth, &c. The vse whereof is very necessary and fit to be knowne, as well to Physicians and Phlebotomists, as to Astronomers and Navigators, as by Art, practice, and experience, is learned in these Sciences can very well Iudge. Now it resteth to shew you the signification of all these Characters.

♈ Aries, ♉ Taurus, ♊ Gemini, ♋ Cancer, ♌ Leo, ♍ Virgo, ♎ Libra, ♏ Scorpio, ♐ Sagittarius, ♑ Capricorne, ♒ Aquarius, ♓ pisces. ♈ Caput Draconis, ♉ Cauda Draconis. ♄ Saturne, ♃ Iupiter, ♀ Mars. ☉ Sol, ♀ Venus, ☿ Mercurie, ☾ Luna. ☿ Coniunction, * Sextile. ☐ Quarell, Δ Trine, ☿ Opposition.

20. The time of the change, full, and quarters of the Moone.

21. A Table, for the easie finding of the Raignes of the Kings.

23. A table shewing the Returne of Tlloyne day, & dayes of
appearance of Iuries in the Common Pleas published
by me, at the requests and directions of the Judges, for the
knowing the losse of Iuries, by Iuries, thorough mistaking
their day of appearance, &c. Deut. 25. 1. 2.
24. A table of the lawdayes of the courts of the Arches, the
Admirall court: the court of the Audience of Canterbury:
the Praetorian court: the Consistorie court: the court of
Delegates, and of his Highnesse Commissioners vpon Ap-
peales, &c. Deut. 19. 15. 16. 17. 18.
25. Of the diuers motions of the Moone Psalm. 104. 24.
26. Of the time of the tides. Psal. 107. 23. 24. 25. 29.
27. To know the houre of the night by the Moone. Gen. 1. 16
28. Of the unequal rising and setting of the Moone.
29. Astronomieall elections for Physick. } Gen. 1. 14.
30. Briefe rules of husbandry.
31. A description of the 4. elements, and their government
in the body.
32. The naturall cause of all ayrie Meteors. Iob. 26. & 37.
33. Of the Eclipses this present yeare. Iob. 36. 24. 25. 26.
34. Of the effects likely to ensue. Ila. 47. 10. 11. Ezek. 12. 25
35. An example of the situation & roundnesse of the earth.
Psal. 104.
36. How to know the distance of the Planets from the earth.
37. Of the 4. quarters compared with the Hebrews months.
38. Of the naturall inclination of the ayre. Iob. 38. 31. 32.
39. The reason why the iudgements of the best learned doe
often falle. Pro. 31. 30. Ila. 55. 8. 9. Amo. 4. 7. Ro. 11. 33. 34
39. The spirituall vse of Astrologie. Luk. 11. 54. 55. 56. 57
Math. 16.

The secret things belong to the Lord our God, but the
things reueiled belong vnto vs and to our children for
euer, that we may doe all the words of this lawe. Deut.
29. 29.

**A briefe Computation of time, complete
within this present yeare. 1605.**

F rom the creation of the world, untill this present yeare.	5567.
are contained	
From the creation untill the generall Flood.	1656
From the creation of the world untill Christ.	3962
From Noahs Flood untill this present yeare.	3911
Since the birth of Abraham.	3619.
Since the Israelites departed out of Egypt.	3114
Since the destruction of the Citie of Troy.	2788

*A perfect, and easie Table, for the ready
finding of the beginning of the Raignes of eu-
erie of the Kings of England, noted in
the Kalender.*

The vse wherof is thus, first, in this Table finde the name
of the King, which you desire to knowens they are heere
placed in order, with the yeare of our Lord, & the month
wherein he began his Raigne, then turne to the same month
in the Kalender, and you shall finde his name on the same day
vpon the which he began to raigne, with the number of yeres
complet (written in the next line) since the same time. And the
number of yeres, monthes, and daies, that the same King
Raigned (as for example) K. Edward, the 3. began his raigne
in the yeare of our Lord, 1327. in the month of Januar. Now
turning to Januar. I finde K. Edward the 3, on the 25. day.
vpon which day he began to Raigne, 278. yeres since, and hee
Raigned 50. yeres 5. monthes and 7. daies.

The Table

Willia. Conq. 1066	Octo.	K. Hen. 4. 1399	Septembe.
Willia. Rufus. 1087	Sep.	K. He. 5. 1413	March.
K. Henry. 1. 1100	Aug.	K. He. 6. 1422	August.
K. Stephen. 1135	Dec.	K. Ed. 4. 1461	March.
K. Henry. 2. 1154	Octo.	K. Ed. 5. 1483	April.
K. Richard. I. 1189	July.	K. Ric. 3. 1483	June.
K. Iohn. 1199	April	K. He. 7. 1485	August
K. Henry. 3. 1216	Octo.	K. Hen. 8. 1509	April.
K. Edward. 1. 1272	Nov.	K. Ed. 6. 1546	Januarie.
K. Edward. 2. 1307	July.	Q. Mary. 1553	July.
K. Edward. 3. 1327	Janu.	Q. Eliza. 1558	November
K. Richard. 2. 1377	June.	K. James. 1603	March.

A perfect Table, shewing the Returne, or Essoyne
 dayes. The day of Exception. The day of Returna Breuium:
 And the day of Appearance of Iuries in the Common Pleas:
 Published for the generall good of all men, whose affaires
 tend therevnto. The vie whereof is this; A Write is retur-
 nable in Quindeno Martinj, that is, the 25. of Nouember,
 being Essoyne day. The 26. is the day of Exception. The
 27. Returna Breuium. And the 28 day Thursday, is
 the day of Appearance. &c.

Note this generally; that the first and last dayes of appea-
 rance, are the first and last dayes of the Terme.

Anno. Domin. 1605.	The Return or Essoyne day,	The dayes of appea- rance for the parties, and the Jury:
Hilary Terme.	Octabis Hilarie, Janu: 21.	Janu: 23, Wednesd.

October.	7. 14. 19. 29.	8. 15. 21. 30.	9. 16. 22. 31.
November.	2. 12. 21. 26.	3. 13. 22. 27.	5. 14. 23. 28.
December.	2. 9.	3. 10.	4. 11.

Of Numeration, for such as haue not that knowledge.

First, learne to know
these nine figures. { i. ii. iii. iiij. v. vi. vii. viij. ix.

Then learne what each figure is in his place, as thus, 54031.

The figure of one in the first place is but one, 2. in the second
place, is 2. times himselfe, that is, 22. 0. in the third place, (of
hundreds) is nought. 4. in the fourth place, is so many thou-
sand: 5. in the fift place, is so many 2. thousandes, &c. the totall is
54031. The like is to be obserued in all other summes.

Of

Of the diuers motions of the Moone.

There is a great Circle, imagined to be in the Heauens call'd the Zodiack; being diuided into twelue parts, called Signes: each of those parts into 30. degrees, (which make 360. the tot ill) and euery degree into 60. min. &c. within the which, the Moone maketh her period or resolution in 27. dayes, 7. houres, 43. min. & halfe (note that in one houre are 60. minutes) And she continueth her motion in one signe, (according to her meane motion) 2. dayes, 6. houres, 39. minutes, here. In her slow motion, 2. dayes 21. houres. And in her swift motion, 2. dayes wanting 20. min. &c. Again, she hath another motion of declining: sometime 5. degrees Northward: and sometime 5. degrees Southward: the difference whereof is 10. degrees: by both the which, she continually doth passe, once in a moneth; for if she kept one true line, it would fall out of necessity, that euery full she must suffer an Eclipse: and euery change, the Sun would be darkened, or hid from our sight, by the body of the Moone, &c. Yet I leaue here to speake of her Eccentricall Orbe, her Apogæon, and Perigæon, in her Epycicle, and her Parallaxis. The Moone hauing thus many diuersities of motions, Then how sonde, or ignorant, are those that set forth perpetuall and generall Tables of the true rising and setting of the Moone: Alwaies affirming, that at the first quarter, she setteth iust 6. houres after the Sun, &c. Examine it thus: When the Sun is entring Aries, and the Moone entring Cancer, (then is she iust in the first quarter,) the Sunne setteth at 6. to the which adde 6. as in the Table it maketh 12. her setting. But the Moone in Can. is South at 6. and her half ark (hauing 5. degrees North Latitude) is 9. houres, wanting 7. min. which varieth neare 3. houres, &c. Other common errors I will open as occasion shall serue.

**A brieft rule, to knowe the time of the
Tyde or full Sea, in all the principall Hauens
in England: And also to know the houre of the
night by the Moone.**

The age of the Moone.	Her co- ming South.	High to water Lond.	These houres & min. added to her coming to South, sheweth the Tydes.	H. M.
Dayes.	H.	M.	Latitub: South:	Portino:

To know the tyme of the Tydes.

First, for the time you desire, finde the age of the Moone in the Kalender (and note that at the first quarter, her age is xv dayes and a halfe: At the full, xv. dayes, at the last quarter, xii dayes and a halfe: and changeth the xxx. day): her age being found, looke in this Table, at what time she cometh to the South, at the same age, and to the time there found, add the houres and minutes to be added: Following the name of the place you desire to know the Tyde, and the whole sheweth the time you desire.

As for example, This were the xx. day of January; the Moone is xi. dayes old: Now in this table, vnder the age of the Moone, I finde xi. in the first space: Then I finde her conuening to the South at 8. a clock, and 48. minutes (here note, that 60. minutes make one houre). Now for Barwick, I finde in the last space 3. houres, 45. minutes, which added to 8. houres, 48. min. (before found) make 12 a clock, and 33. min. The time of high water at Barwick, the same xx. day of January, and the like order is to be obserued in all. The time of high water at London, you shall finde (corrected according to obseruation) for each day of the Moone, vnder the tytle of High-water at London, &c.

To finde the houre of the night, by the Moone, first finde the time of her conuening to the South (as before) which being noted, then repaire to a Summe Dyall, as you would do, if the Sun did shine, and marke what number of houres & minutes the shadow of the Dyall doth want of the South point, or xii. a clock, so much doth it then want, of the time found in this Table, and looke how much the shadow is past xii. so much is the houre past that is found in the Table.

As for example; The xx. day of January, the Moone is xi. dayes olde, her South point (in this Table) is viii. a clock, and 48. minutes, that is, 3. quarters of an houre, and 3. minutes past viii. and I finde her shadow in the Dyall, at ten, which lacketh ii. houres of xii. or the South; Therefore it wanteth ii. houres of viii. and iii. quarters; I conclude, it is iii. quarters past vi. a clocke.

But yet I would haue you to know, that the Moone hath no such certain time of rising, and setting, according to her age: As of her conuening to the South; Neither at her full, doth she rise, or set, at Sun rising, or setting; but only at the time of an Eclipse; As elsewhere I shew more at large: The Summe, or Moone being in the South, are alwaies vpon the xii. a clocke point; but being vpon the Horizontall, East, or West point, they are not vpon the point of 6. a clocke; (As many ignorant Harriners haue accounted) Neither vpon the Southeast, or Southwest, is it 9. or 3. a clock, &c.

*Astronomicall Elections, briefly described, for
administrati^on of Physicke.*

A In all other parts of Physicke, so in Phlebotomy or let-
ting of blood, first fitly and circumspectly is to be
considered, and certainly knowne the cause, As whether
it be needfull and good to the Patient, as that it bee to purge
the body, of some vnnaturall, naughty and superfluous humors,
or otherwise, letting of blood is very dangerous, and open-
neth a way to many greivous infirmities. A note generally,
that it is not convenient either for a very lean and weak man,
or for a very fatte and grosse man to be let blood, neither for a
child vnder 14. yeares of age, and an old man aboue 56. Now
there remaineth to be considered, how it standeth wth the pa-
tient inwardly, for his complexion and age: and outwardly, for
the time of the yeare, the time of the day, and dyet.

Briefe Rules of Husbandry.

Plant and graffe, the Moone increasing, in Tau. Aquari.
Fell Timber from Widsomer til Thrist: the moon encreasing.
Fell Coppice and Fuel in the first quarter.
Cut your Vines in February or March.
Selde Cattle, the Moone in Aries, Sagit. or Capricorne.
Gather fruites, hearbes & flowers, the Moone at the full
Set and sowe, the Moone in Tau. Virg. or Capri.
Remoue Trees at the last quarter, in Nouember.
Sheare sheep, and cut haire from heat, the Moone increasing.
I meane not shearing water-spaniele. Cut or trimming haire
ouer eares and shoulders. Affirmate follies!
To keep thy haire safely, from falling vntimely:
Hot scalding Bathes deny, hate wain on company:
Abstaine from venery. purge choller warily,
Let thee blood needdully, iustice not willingly.

A briefe, plaine, and true description of the foure Elements, their nature, and situation in mans body; called the foure Complexions. with their diseases incident; As also the naturall caule of aerie Meteors; 1. As blasting. 2. Deaw, 3 Yce, 4 Raine, 5 Snow, 6 Haile, 7 Winde, 8. Shooting Starres, 9 Blazing Starres, 10. Fiery Impressions, 11. Thunder, 12 Lightning, 13 Rainebowe, 14. Eclipses.

There are foure Elements, viz. Fire, Aire, Water, and Earth: The Fire is hote and dry, very light, aspiring, bright and cleare, placed aboue the Ayre, next vnder the Dybe of the Moone: The Ayre hote & moist, ascending, light and cleare, by his heate toynd to the fire, and by his moisture toynd to the water: The Water colde and moist, descending waightie, and mixt, by his moisture, toynd to the Ayre, And by his coldnesse, toynd to the Earth: The Earth, colde and drye: Falling, heauy, and thicke, the lowest of the foure Elements, placed in the very Center, or middle of the heauens: As of nature, most contrary to them, &c.

And these foure Elements, are the simples, wherof all things (vnder the Moone) are made, compounded, and mixt.

As in our bodies, we may see full plaine,
that Fire and Ayre, in vitall spirits raigne;
The flesh is earth, the Humors waters bee,
so in the blood, the lowest in degree
Is Melancholy, earthy, fildom good,
and in the midd' st, like ayre, swimmes purest blood.
Next waury flegme, and on the top their bubbles,
that tyrie choller, which so many troubles;
This hote-brained choller, quartain Ague breeds,
and sad Hectique Feauer, when drinesse exceeds.
So moistures excelsse, makes Drop sic his page,
and hoary-fleec'd coldnes summons old age;
So in the Ayre, by vertue of heauens light,
are Meteors bred, apparant to ones sight:

As in a bottle-glasse, a flame combine,
whose mouth, in waters stands, leaues nought behind.

But forceably this humor vp exhales,
and there it hangs, within this glazen walles:

Right so the Sun, two sorts of vapours draws
from flowry Fields, and from the waving lawes;

The one is thin, pure, nimble, burning dry,
Th'other hote and moist, rising heavily;

1. But if so thin a vapour eleuate,
as vnto water cannot be translate;

Then fallcs a mildeawe, blacke and mistie b'ast,
which on the hearbes and flowers hangeth fast.

2. If scarce to mid-heauen, slowly it doth rise,

3. In Spring tis cleare, in Winter turn'd to yce,

4. If actively in th'ayre, it seekes to shrowde,
by cold, this water's turn'd into a cloude;

Which on the winged winde, then flies amaine,
and once dissol'd, then powres downe the raine.

5. Sometimes the cloud conieald with freezing colde,
throwes locks of Snow-white Wooll amongst the folde.

6. Sometimes againe, Th'excelsiue cold aloft
to Haie stones turnes, the drops of Raine, full oft.

7. When Starres from earth, drawes fumes both hot & dry,
which into Phœbus lappe doth tecke to flye;

Then lotty freezing cold, makes them retyre,
and from the fields, the fumes another tyre

Which stops their course, and driues them back againe,
thus driuing here and there, in th'ayre remaine.

So that this vapour taking little rest,
moves circled wise, from North, East, South, and West.

8. Likewise hote fumes exhald in th'ayre aboue,
of substance thick, like glew, vnapt to moue;

Hou'ring aloft, until it kindle & flies,

even like a squib, appearing to our eyes:

Which shooting Starres, some men doth foolishly call,
as though those heauenly Lamps, from heauen could fall.

9. But if this fume, a higher place doth take
 Lightning it selfe, a Blazing Starre doth make
 The which in burning longer doth endure,
 fore dooming vengeance for our liues vnpure.
10. In diuers shapes, sometimes it doth appeare
 as like a Dragon, Goate, a Torch, or Speare:
 11. But vapours hote, and dry, vvith moisture mist
 Exhale, and fouled in a cloude, there fixt;
 Suppress vvith heate, & moysture, breakes afunder;
 and makes a roaring noyse, which we call Thunder.
12. Forth of whole crazed sides, burstes fire flashes, (dashes
 vvhole Lightning flames, through th'ayre most swiftly
 13, And on a watry Cloud, if Suane doth shine,
 the Ragine-bowe then appeares, Gods heavenly signe.

Thus we see, that the mightie hand of God, hath so deu-
 ded the worlde, that in the middle thereof (viz.) vnder the
 Moone, and aboue the Earth) are layed all these apparitions,
 before expell'd. Some of the which, are appointed to make
 the earth to yeelde her fruits; the rest as weapons against our
 sinne, continually to engraue in our stonie hearts, the awe-
 full loue, and sweete alluring feare, of the mightie Iehouah:
 who would haue no man perrish, but would haue all men come
 to repentance, and be saued: calling, and exhorting therunto, by
 these his heavenly ministers. &c. As he did vnto Hierusalem;
 Ezek: 10. Iere. 19. Maca. 5. O England, returne vnto the
 Lord thy God, for thou hast fallen by thine iniquitie. Thou
 hast played the Harlot with many Louers: yet turne a-
 gaine vnto me, and I will heale your rebellions, &c. Oh, let vs
 confesse our sinnes with David, and amend our liues: that
 our rebellions may bee healed by Christ, our heavenly Phy-
 sician.

Ponde.

1605.

Of the Eclipses, this present yeare. 1605

The Moone is darkened to all creatures eyes,
Whilſt in the shadow of the earth ſhe lyes.

The xxiii. day of March, this present yeare, 1605. The lesser of the ſix great Lights, gouernesse of the night, Ladie and mistresses of the floodes and Seas. The lowest of the Planets: transporter of their In. Inuentiſhall powers, vnto the inferiours creatures, &c. (I meane the Moone) being opposite vnto the Sunne, (her light giuer,) At viii. of the clocke at night. the ſame xxiii. day, hauing to ſhewe her greatſt beautie of light, and absolute roundneſſe, will be preuented by the interpoſition of this darke Sphere of metalitie, or Globe of the earth: which will then let, or hinder the glorious and bright ſtaring beames of the Sunne, from giuing his expected light, vnto the reflectiue body of the Moone, wherby ſhe will ſuffer an Eclipse, or loſſe of light, vnto the quantitie of xii. Degrees, and a quarter, (her whole body being diuided into xii. Degrees) in diameter, ſhee will beginne to looſe her light, at vi. a clocke, and xxi. minutes paſt. And in her chiefeſt obſcuriti:, at viii. And not fully recouered, till xxx. minutes paſt ix. a clocke ſo that from the beginning to the end, will be iii. houres, cviii. minutes: that ſmall light ſhee will retain in the chiefeſt time of her darkneſſe, will appeare vpon the Southerly ſide of her body. This Eclipse will plainly ſhewe vnto euery beholder thereof, by the shadow of the earth, vpon the body of the Moone, that the earth and waters, make one round body: for ſuch forme as the ſhadow giueth, the ſame forme, the body beareth.

Of the Eclipse of the Sunne.

Vpon the vii. day of April, will appeare an eclipse of the Sun, to thoſe that inhabit are vnto Noua Guina, in the Southerne parts of the world, but not to be ſeent of vs, by reaſon of the Parallaxes of the Moone, by obſeruation. And the doctrine of Trigonologie ſound the quantity of the light from the earth.

of

Vpon the xvii. day of September, at iiii. a clocke, & xlii. min. in the morning, The Moone then at the full, will suffer an Eclipse, or losse of light, vnto the quantitie of vii. degrees, and a halfe: that is, more then halfe the bodie of the Moone: she shall begin to loose her light at ii. a clock, and xlii. min. And ende at v. and xli. min. so that from the beginning to the end will be ii. houres lxxi. minutes, the side retaining light, is North.

Of the great Eclipse of the Sunne. 1605.

The Moone an obiekt, twixt Soll, and our sight,
Will take from vs, the comfort of his light.

The second day of October, 1605. being Wednesday, at one of the clocke, and xxxix. min. after noone; The most ioyfull, and Royall Planet Soll, bright shining Phœbus. The eye of the world, the pleasure of the day, the beautie of heauen, The gl-ner of light, and comfort to all creatures; The true directer in computations of yeares, and dayes; Of times and seasons; The Instrumentall, nourisher, comforter, and kindly perfecter, and ripener of the fruites of the earth; by his glorious and Radi-entall fructifying beames of light; At whose appearance, and ori-entall rising; All good creatures of the earth reioyce, Mat. 5. 45 But the fierce and deuouring beastes of woods and denness; which in the night haue bene hunting for their prey, seeking whom they might deuour: They, when the light beginneth to approach, either for shame, or feare, (As euil lurketh in darke-ness, for shame of being seene: and cannot abide the light, for feare of being knowne,) Poste speedily to their Cauces of Ini-quitic, &c.) Sam. 23. 4. Eccle. 10. 20. Iohn 12. 36. The comfort and beautie of this great light, will be taken from vs, with as great a darknesse, apparant to our sight, by reason of the Inter-position, or mouing of the dark body of the Moone (at the same instant before noted) Directly betweene our sight and the Sun, by little and little; causing darknesse to encrease to vs, which in-
habit

habite neere to the Center of the shadowe of the Moone, will quite deprive vs of the totall light of the Sunne: whereby (for a little space of time) we shall behold no part of light, but onely the dusky body of the Moone: yet within one houre, by the passing ouer (in respect of our sight) of the Moone, toward the East from the Sunne, he will againe by degrees, appeare vnto vs, in his former beautie of light: The beginning of this Eclipse, will be seene (at London) xxviii. minutes after high noon: And end halfe an houre after two of the clock: The continuance whereof will be two houres, and iii. min. The darknesse will begin to appeare vpon the side on the right hand: And ende on the side on the left hand. But those that inhabit in the Northerly parts of this land, may beholde some light, in the vpper part of the Sunne, &c. 1. Ioh. 1. 7. As touching the effects, thus much I gather: That, within these three yeares, There is like to happen great mortallitie amongst some kinde of Cattle, with losse to many husbandmen; And that they shall rather want the fruites of the earth, then house-rooms to laie them in: whereby we are threatned with scarcitie of some speciall commodities of the earths increase: for many are like to see heauy markets, where themselves haue light purses. And couetous Sfarmongers, will sooner fill their wide Barnes for a dearth, then their narrow pinching hearts with enough: I call them narrow hearts, by reason that their consciences are so large, that the best of a Gyant cannot retaine the one, but it will thrust the other to a pinching vaine: But I would wish such to remember, how hard it is for them to enter into the kingdom: of heauen. And how greuous are the paines of hell? &c. Mar. 13. 21. 22. & 4. 19. May 30. 33. As touching the disposition of the ayre, If the winter times proue not so mild as we desire, then let vs remember what God demaundeth of vs, Levit. 26. Deut. 11. & 28. yet we performe no part thereof. If we desire lesse frosts, and fewer hard boysterous blastes, then let vs cast from vs, our boysterous blastes of malice, and mollifie our moite hard and frozen stony hearts. If we desire fewer floods of water, and more temperate deawes, Then let vs spee to the Pil of Syon; from the
ouer.

May, the v. and viii. great wi. idc, the x. and xii. Thunder, lightning, or tempest, the ii. vi. vii. viii. xiii. and after the full Moone Raine.

Kaijts	{	Taurus,	{	Aestiuall	{	June.	{	The	{	Cancer
		Ab,				July.		Sun		Leo.
		Elud,				August.		in		Virgo.

Summer beginneth the xii. day of June, The Sun entering into the aestiuall solstitial point of Cancer, making our longest day, & shortest night, his Meridian Altitude 62. degrees. The quarter continueth vntill the xiii. of September, containing 91. dayes: of nature hote and dry, likened to middle age, Subject to many hote and dangerous sicknesses. June the xii. & xxi. very great windes. The iii. and xxvii. Thunder. The v. vi. vii. xii. xiii. and the last day, raynie. July, The xii. xxii. and xxv. windy. The xvi. xx. xxvi. and xxx. Thunder and raine. The iii. v. vi. xii. xiii. and xxi. raine, and Thunder. August, The xvii. xvi. & xxvii. windc and raine. The xii. and xix.
